

**Submission for task 6.1.2 – COS300017**

**Duncan Mackay (101120310)**

2.

In comparing scenarios and user stories. Scenarios include a lot of extra information that is not needed by the developer to understand what must be implemented into the application. With users stories it allows the developer to see what feature the user wants implemented and why they want it implemented so that they can rank the importance of these.
